

# SW60

## Natural treatment for horses

### Trial 3

**Veterinarian: Dr. Larry Agle**

**Patient: 11 Year Old Thoroughbred Cross**

**7/6/17**

Presenting complaint: Hives, and fungus along back, shoulders, and rump area  
Cleaned area with Phytovet CK and dried area thoroughly before applying SW60.  
Administered Excede shot, and dispensed Griseofulvicin Packets to help with the fungal infection. Treatment plan was to shampoo affected areas every 3 days for 10 days, dry areas thoroughly and apply SW60 1 time daily for 10- 14 days due to the large area affected.

**7/18/17**

Skin was much improved post treatment.

**10/3/17**

Skin issue reoccurred, we prescribed the same treatment plan of SW60 and Phytovet CK, with another Excede shot, and the issue was resolved on the following recheck appointment.
